

Specification: Decra®Flex

Rubber and aggregate bound paving

hms
Specialist Surfacing

Decra®Flex is a rubber-gravel mix that combines the flexibility of rubber with the strength and durability of natural stone aggregate.

Once installed it creates a flexible permeable and slip-resistant paving that allows for suitable drainage in cities, towns and rural locations.

Subbase

Depending on application, the base build-up recommendations are between 25mm and 50mm and should use either concrete, macadam, flags or MOT Type 1 material.

Compacted earth can only be used with a surface depth of 35mm or greater.

Please note, HMS does not lay the subbase, but we will happily recommend a contractor that will.

Specification

Material

50:50 rubber and aggregate mix. The mix is 1:1 in weight, but not equal in volume.

Resin

High Tensile Single Component Binder (PU)

Curing period

6 – 24 hour

Certifications

BS 7188 and EN 1177

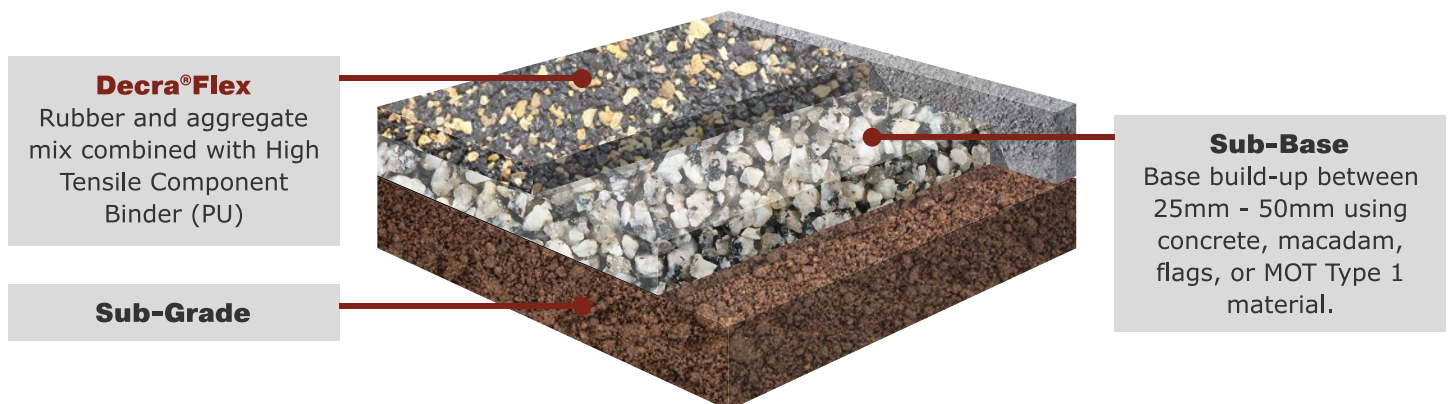

Installation depth

25 – 50mm

Usage

Not suitable for vehicle traffic unless laid to tarmac sub-base at a depth of 50mm

Recommended Build-up

hms
Specialist Surfacing

Decra®Flex

Benefits

Suitable for wheelchair and pushchair users

Permeable paving that reduces the risk of flooding

Durable and hard-wearing

Ideal for cycle lanes, footpaths and bridleways

Reduces or limits planning requirements

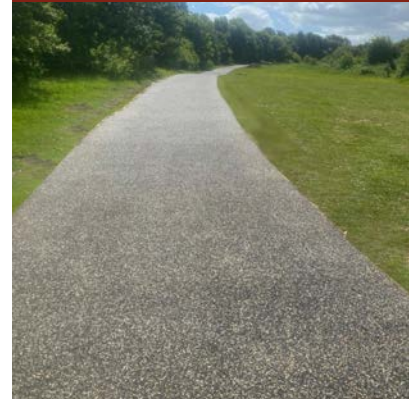

Suitable for no-dig construction

No passive support required

We wouldn't hesitate to recommend HMS

"We've worked with HMS Specialist Surfacing for many years and they have never let us down. Their communication exceeds expectations and all projects are finished to an excellent standard."

Naomi Brown, Director,
S Brown Paving Ltd

"We use HMS for all our projects that require resin bound or bonded paving. With first-class workmanship and finish, we wouldn't go anywhere else."

Mike L'esperance,
CIK Construction
