The DES PDM 24 CLEAN family is mainly used in the food&pharma production thanks to the rounded shape without edges which avoids dirt accumulation and allows frequent washing.

The cable entry plate can be fixed to the panel from the inside with four hidden screws or with snap fastening with four hooks.

The holes location is guided by a laser printing which guarantees the front clean area during the operation.

The first front membrane is lightly drilled with a small screwdriver, while the second parallel membrane acts as a reinforcement, ensuring a very high strain relief and water resistance.
