

## Easy to use, with energy savings up to 30% on your gas consumption

Mark recommends an ECOFAN with every air heater. A combination of these products provides optimum comfort and good heat distribution within the room. It is known that hot air rises which means that an air heater requires more time to heat up a room. A thermostatically-controlled ECOFAN transports the warm blanket under the roof to the occupied area. As a result, the room heats up more quickly, and gas consumption can in some cases be reduced by up to 30%.

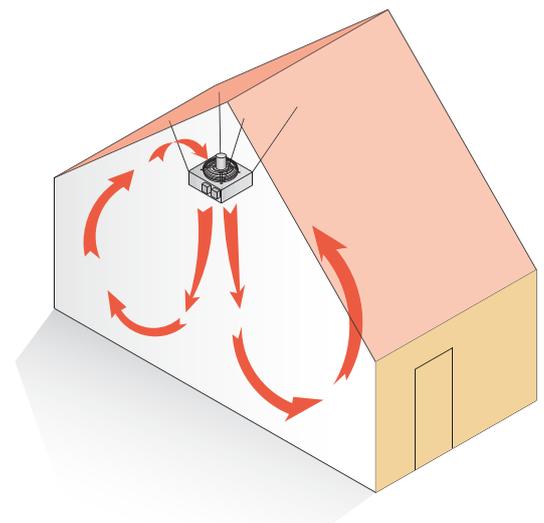

The ECOFAN recirculating fan is available with various air displacements from 4.000 to 14.000 m<sup>3</sup>/h. The unit comes as standard with a reverse operating room thermostat that switches on the fan when the area under the ceiling becomes hot.

The ECOFAN can be used in construction halls, workshops, garages and logistics areas.

Mark provides a full 2 year product warranty as standard.

#### Features of the Mark ECOFAN

- Aluzinc housing
- Integrated thermostat
- 4-sided downflow hood
- Low maintenance
