

Fix lockers side by side to create runs of lockers using nesting bolts supplied.

Battening is an option to enable lockers to be fixed back to walls where skirting, coving or other obstructions prevent the locker being located directly to the wall.

Maximum batten size recommended is 50x50mm

Top of batten is set 10mm down from the top of the locker

End vertical battens are set 50mm in from the locker ends

2 off fixing points per locker nesting, lockers to be fixed through the top compartment.

If spacing requirement is greater than 50mm, please contact the supplier

Battens and lockers to be fixed back to rear wall (Hollow or solid walls) with suitable fixing screws and wall plugs

3Dlockers
