

SOLUTIONS FOR BAG & SACK MANUFACTURERS

Valco Melton is a world-leading manufacturer of hot melt and cold glue adhesive dispensing equipment and quality inspection systems.

Our extensive range of solutions for the manufacturing and sealing of bags and sacks helps customers produce the highest quality product, while reducing adhesive usage, eliminating waste and improving overall production efficiency.

Drawing on over 60 years of technical experience, we have developed cutting-edge application technologies for non-contact, direct contact, swirl-spray, bead and ribbon pattern gluing, spot gluing and lamination. Such a large selection of components enables us to provide bag manufacturers with solutions that suit any budget and application requirements.

Combined with our commitment to providing unparalleled customer service, we offer one of the largest support networks with a team of knowledgeable sales and service personnel working to provide personal assistance with installations, troubleshooting and support of installed equipment in over 76 countries worldwide.

**Adhesive Dispensing, Cold
Glue & Hot Melt**

GET THESE IMMEDIATE BENEFITS

1

Produce a superior quality product at highest possible machine speeds

2

Reduce maintenance and cleanup

3

Increase uptime

4

Reduce lost production time

5

Less material waste

6

Minimum adhesive usage

APPLICATIONS TO GUARANTEE THE BEST PRODUCT

Valco Melton offers a complete range of non-contact, direct contact, swirl-spray, bead and ribbon pattern gluing, spot gluing and lamination applicators. This large selection of components enables us to provide bag manufacturers with solutions that suit any budget and unique application requirements.

SACK

APPLICATORS

Choose from the largest selection of cold glue systems and hot melt compatible parts & equipment available on the market today. Electric and pneumatic valves are available in contact or non-contact extrusion technologies to cover every type of speed or pattern requirement you may need in bag and sack production including stitch, continuous lines, ribbon coating and spray.

Tailored solutions are offered in:

- High speed electric valves for precision glue application for paste dot
- Non-contact and contact pattern coating for bag bottom application
- Hot melt ribbon coaters for pinch bottom bags
- High speed, cross-web hot melt application for hot melt reseal
- Continuous or intermittent beads for film lamination
- Hot melt or cold glue side seam
- Hot melt or cold glue handle patch

Model 524 Valve

Model 300 Series Valve

Model ERO GTE-13

BAG & SACK CONTROLS

Easy to use, multi-channel units provide precision pattern starts/stops and ensure correct adhesive volume at all machine speeds.

Simple, stand-alone flow controls are available for bag and sack manufacturing that synchronize adhesive output with machine speed for continuous applications such as seam glue, or laminating.

MCP-8

CP-AV Runner

ADHESIVE SUPPLY

Cold Glue:

Choose from piston pump, diaphragm pump or a selection of stainless-steel tanks. Our precision, pressure-balancing glue regulators provide consistent adhesive volume as machine speed increases or decreases.

DD-1 Pump For Cold Glue

Hot Melt:

We offer a range of hot melt units, gear pump driven or piston pump, with melt rates from 10 lbs (5kg) /hr to 300 lbs (135 kgs) lbs/hr. Systems also available for use with PUR reactive hot melt formulas.

D10 & D16 Melt Units

SYSTEM SUPPORT OPTIONS

Valco Melton makes a large variety of ancillary equipment for all types of adhesive applications.

- Automatic Feeding Systems for Hot Melt– Eliminates the need for operator attention while reducing chances of adhesive contamination and char
- Automatic liquid level alarms – Alerts the operator to low adhesive supply
- Automatic level control – Eliminates the need for operator attention for open glue pots
