

Motorcycle Security Barrier 2000mm Galvanised

The Motorcycle Security Barrier is ideal for securing motorcycles. The Security Barrier is based upon a standard perimeter barrier of 76mm outside diameter tube, but has the addition of loose steel bars inserted into the lower horizontal tube and legs, this greatly increases the difficulty of cutting through the tube in order to make away with anything locked to the barrier. The Motorcycle Security Barrier is fully galvanised and only available in a Concrete in finish.

The sign shown is available at extra cost.

Tested and approved by Sold Secure.

This product has achieved Secured by Design status.
