Co-location - enclosures

The newly launched Prism co-location range has been re-designed to accommodate the requirements of multi user requirements. Available in FI and PI format there are a choice of 2 and 4 compartment products and available in multiple footprint sizes. In the continued struggle for real estate within the data centre, the co-location range will provide the maximum utilisation of space.

Co-location

With a choice of four footprints and two compartment options there is a co-location cabinet for every installation. This can be mated with any PI or FI cabinet to provide a solution for any co-location environment and provide additional revenue per square metre. The product is supplied with secure internal cable trunking to provide total security for each compartment. This trunking can be accessed from either the top or the bottom of each enclosure.

Typical applications

- Server farms
- Multiple Co-location data centres
- Hosting centres

Features list

- Mesh front doors with combination locks with master Key override
- Mesh rear doors with combination locks with master Key override
- 19 inch mounting angles (2 x Rear 2 x front)
- Secure cable ducting accessible in each location for either top or bottom access
- Heavy duty castors fitted as standard
- Earthing kits supplied to each section

Benefits and additional features

- Floor space optimisation
- Baying PI and FI
- Compatability with the full range of PI accessories
- Multiple working variants available to assist in providing differing levels of security
