

# High Friction Surfacing from HMS®

**High Friction Surfacing, more commonly known as 'Anti-skid' surfacing, is an epoxy resin process dressed with high PSV calcined bauxite aggregate.**

HMS® high friction surfacing is available in either HAPAS/BBA Approved Type 1 Hot or Cold lay, and installed by HAPAS & BBA Approved installers.

## Key facts:

- HMS is accredited as a 'BBA Approved Installer' (Installer Number 5020)
- Only 'Type 1' high friction surfacing processes are permitted on motorway and trunk roads
- To meet all demands, HMS® Decorative Surfacing Ltd are able to offer other specialist processes for projects off the highway which require special consideration
- Will help minimise the risk of skids on areas such as sharp bends, approaches to and across major junctions, gradients, roundabouts, traffic signals, pedestrian crossings and railway level crossings

**SPECIALIST SURFACING**
